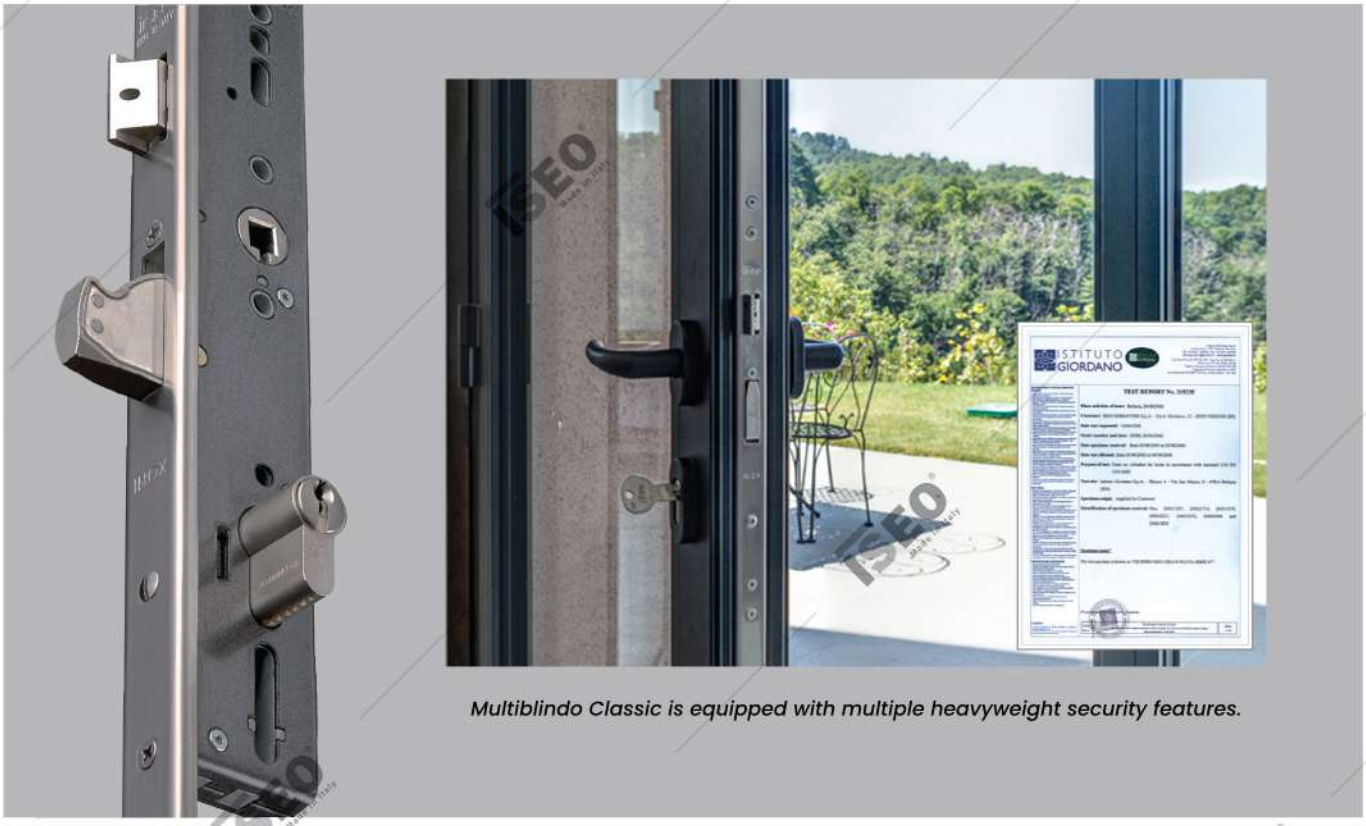
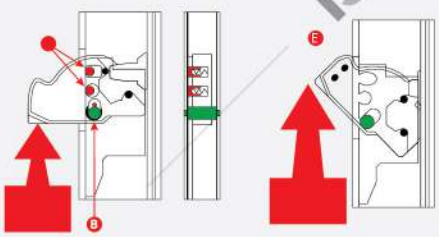
Multiblindo Classic



Multiblindo Classic is equipped with multiple heavyweight security features.

By applying an upwards force, equivalent to one metric ton, breaking point "B" yields letting pins "C" insert themselves into their respective spaces in the plate consolidated to the lock case. The deadbolt and the case fundamentally become one single body.

The deadbolt can no longer enter the lock case when its rotation axis is moved, as is interferes with the front plate "E".



A UNIQUE SECURITY CONCEPT

With its exclusive bayonet bolt, anti-picking system and close-on-all-side steel locks case.

AN UNPRECEDENTED EASE OF USE

Supported by a system that reduces turning key force required.

UNEQUALED VERSALITY

Latch, roller latch and plug interchange ability.

DESIGNED AND TESTED

According to the European standards EN 12209:05 (lateral locking version) and prEN 15686 (3-point locking version). It resists lateral forcing with a thrust of over 1000 kg and a front load of over 600 kg.
The corrosion resistance is more than 240 hours in a saline environment.

Endurance : tested over 200,000 opening and closing cycles under 120N load.

LIVING & LEAVING

Multiblindo Easy

TOTAL SECURITY

Multiblindo Easy really allows for an easy living, in full comfort and security. User can easily choose between three locking modes (total, light, free) that fit their need.

Security in your house is guaranteed only as an ISEO Multiblindo can do.

Multiblindo eMotion

IT'S EUROPEAN

PERFORMA by ISEO has been conceived and developed to meet the requirements of the European market by adopting two different centre distances: 85 and 92mm.

It is solid and weather-sealed, with high versatility to suit different type of application and different frame materials.

The gear box allows for a smoother operation while the soft feel cylinder allows user to lock and unlock the key easily without requiring much force.

ISEO takes cylinder to the next level of security and convenience. Adhering to stricter European standard, ISEO cylinders is designed with multiple security measures, ranging from anti-duplication to anti-drill.

F9

- Multi-profile system
- Registered profile
  (Without time limit)
- Antidrill pin

F90

- Multi-profile system

  (Without time limit)
- Antidrill pin
- Up to 5 side pins
- Magnetic coding

F9000
Mechatronic Cylinder

The most advanced ISEO cylinder combines mechanical and electronic features into a highly practical and secure cylinder.

- Mechanical coding compatible with all CSF cylinders.
- Data and energy transfer without electric contact.
- No wiring, energy is supplied by the key (fed by lithium batteries).
- Programming by software and PC interface.
- Multiple functions for access control.
  (time slots, events detection, keys enabling and disabling).

CYLINDERS PROFILES

- Endless combinations
- Different security levels
- Utmost security, anywhere: hospitals, schools, shopping centres, research centres, office buildings & banks.
- Versatility and flexibility.
- A universal system.
- Registered and patented profiles. Applicable to all cylinders.

USER'S KEY

KEY TO THE FUTURE

F9000 Mechatronic Cylinder combines the reliability of mechanics with the flexibility and convenience of electronics to achieve an unprecedented security level. F9000 meets all the security requirement for a complex access system.

KEY WITH A UNIQUE PERSONALITY

F9000 Mechatronic Cylinder is able to recognize pre-programmed key and recording exactly who and when an assigned key accessed the lock. It also able to allocate time slots, ensuring no unauthorized access is possible.

EASY PROGRAMMING

Programming by software and PC interface is very easy. If a key is lost, simply disable the access right of the lost key through the program.

SECURITY AND CONTROLS

F9000 Mechatronic Cylinder allows different security levels and has multiple functions for access control such as time slots, event detection, keys enabling and keys disabling. It ensures that only authorized person at pre-programmed time slots has access in the building.

UTMOST CONVENIENCE

F9000 Mechatronic Cylinder can directly replace the old regular cylinder. It works without any wiring since the energy is supplied by the key. All data and energy transfer are conducted without electric contact.

ENDLESS POSSIBILITIES OF EXTENSION

F9000 Mechatronic Cylinder versatility and flexibility allows the system to expand easily.

ISEO F9000 Mechatronic Cylinder is the ideal solution for access control in residential and public buildings.

X1R SMART

Smart Is Also Intelegent

Access Control

Transponder Reader (TAG)

Keypad

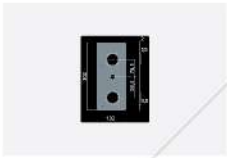
Radio Control

Internal Programming Logic

I/O Interface Card (In & Out)

Deviator

122.40.00



99.668.FP1

9999.00.15

Today safety is also intelligent. The new x1R 2008 models, unlike the previous model, offer various ways off managing the access code.

Based on your specific needs you can choose whether to create a door that can be opened using a transponder reader (TAG), a numeric code (backlit keypad for optimum night vision) or a rolling code radio control, that can even interact with alarm systems and other access barriers such as gates, garage doors, etc, even when it's already installed.

For the more demanding, x1R can also communicate and exchange data with all domotic systems using an I/O card.

In developing this new vision we have given ample space to design and the appearance of visible accessories in order to avoid altering the door's final appearance and make it compatible with normal construction standards.

The result is that all electronic access controls have been inserted in the same faceplate that is normally used to decorate the cylinder and protect is externally. In the event of a power cut or if any other electrical problem should prevent it from working correctly, no problem: for your safety you can always open and close you home using traditional mechanical key, which if you wish can accompany you discreetly at all times inside the transponder xKey.
